ABSTRACT

This report presents an analysis in text and tables of performance on the 1995 and 1996 General Certificate of Secondary Education (GCSE) examinations by students who attended special educational schools in England. The main conclusions were: (1) nearly 70 percent of English special schools who have students at Year 11 (15 to 16 years old) had no students taking the GCSE examinations in 1996; (2) only 4 percent of Year 11 students in special schools achieved 5 or more A to G grades on the GCSE, compared with 87 percent of students in mainstream schools; (3) given the diverse population in special schools, success in examinations would be expected to be higher; and (4) results suggest that special schools are not providing adequate curriculum support for the wide range of students they are teaching in Year 11. Results also support the inclusion of students with disabilities in mainstream secondary schools through increasing accessibility to buildings and curriculum. Appendices detail school performance by local education agency and school. (DB)

CSIE is a Registered Charity 327805 and Company 2253521

Designed by Susan Clarke for Expression Printers Ltd., London N5 1JT
Printed by UWE, Bristol.

CSIE is an independent organisation working towards the inclusion of all pupils with disabilities or learning difficulties in mainstream schools. It provides information and advice about inclusion and related issues. The Centre's commitment to inclusive schools for all is based on human rights principles. Central support for these principles is given by the 1989 United Nations Convention on the Rights of the Child.

CSIE is largely funded by donations from trusts and foundations, with some additional income from the sale of its publications, and small grants from UK LEAs.

SUMMARY

- **Nearly 70 per cent of English special schools who have students at Year 11 (15–16 year olds) made no entry of children to GCSE examinations in 1996.**
- **Only 4 per cent of students in Year 11 of special schools achieved 5 or more grade A to G at GCSE, against 87 per cent in mainstream schools.**
- **Given the diverse population in special schools, success in examinations would be expected to be higher.**
- **It may be that special schools are not able to provide adequate curriculum support for the wide range of students they are teaching in Year 11.**

Introduction by CSIE

The widespread failure by special schools in England to enter pupils for GCSEs and the low level of GCSE passes revealed in this report confirms the concerns of disabled adults and other organisations that special schools are not offering appropriate educational experiences to many of their students.

This report is an analysis of the 1995 and 1996 Secondary Schools Performance League Tables and shows that special schools do not provide the sort of educational boost they often claim to do for large numbers of children who are disabled or who experience difficulties in learning.

This is the first time that data covering GCSE examinations in English special schools has been analysed in this way.

Although success in examinations is not the only measure of educational worth, it is a recognised passport to further education and work which many pupils want to be part of. This denial of examination opportunities for pupils in special schools is another example of the way they miss out generally on valued educational, emotional, and social experiences by being separated from their non-disabled peers and congregated in separate institutions.

The main finding by Professor Gary Thomas is that nearly 70 per cent of English special schools make no entry of any children to GCSE examinations. Only 4 per cent of children in year 11 of special schools (15-16 years) achieved 5 or more grades A-G at GCSE, against 87 per cent in mainstream schools.

A growing number of ordinary schools offer examination entry to increasing numbers of disabled pupils and therefore the chance to gain qualifications and 'tools' with which to leave school or go onto further/higher education. These mainstream schools also offer wider social experiences – particularly relationships with non-disabled peers – as a preparation for the adult world and community living.

CSIE hopes the findings in this report will encourage mainstream secondary schools to develop accessibility to their buildings, the curriculum and to all other activities so that young people, whatever their disability or learning difficulty, can benefit from a broader-based educational experience than that available in special schools. □

Exam performance in special schools

Underachievement in special schools

Since the advent of the National Curriculum, all children – including those in special schools – have been expected to undertake the same curriculum. The principle is of entitlement: that children, whatever their physical or sensory impairment or learning difficulty, are equally entitled to the fullest range of curricular experiences. Along with this entitlement has come an expectation that all children will have equal access to the full range of facilities and opportunities which are offered at school – and after school, in employment.

As part of this, it is expected that all school students will have access to appropriate systems of accreditation. When the Certificate of Secondary Education was introduced (later unified with GCE O levels to form GCSEs), the expectation was that the examinations would provide a certificated profile of each child's education as they ended their years of compulsory schooling. This would apply to all children, in whatever school.

The publication of schools' examination results by the Department for Education and Employment (DfEE) offers the opportunity to check on whether this expectation is being realised. Around one in five schools which take children up to 16 years of age is a special school and there are 1,028 special schools in England. Of these, some specialise in educating children with severe and moderate learning difficulties, while others are primarily for children with physical or sensory impairments or for children with challenging behaviour.

The purpose of the research reported here was to determine to what extent children in these schools are being given access to the examination system, and whether children in these schools are succeeding in that system. Relevant accreditation is a passport to post-compulsory education, the world of work and has a part in building self esteem. For inclusion to be a reality, it is therefore important that children should have access to the examination system.

Sources of information

The Secondary School Performance Tables (DfEE, 1995a, 1996) relating to all secondary schools in England in 1995 and 1996 provide the data on which this analysis is based. The tables differentiate between a number of different kinds of secondary school and for the purposes of this analysis these were merged into two categories: mainstream and special. The results from all schools in England which take children to Year 11 have been analysed: 5,013 in total, comprising 3,985 mainstream secondary schools and 1,028 special schools.

It has been possible to compare the proportions of children obtaining GCSEs to different standards in mainstream and special schools. These comparisons were possible for each of the standards on which data is collected, namely:

- 5 or more GCSEs at grades A-C (this includes 'starred' A)
- 5 or more at grades A-G (this includes 'starred' A)
- 1 or more at grades A-G (this includes 'starred' A).

The findings

Entry for examinations

In 1996, 68.8 per cent of special schools who had children at Year 11 made no entry of children to any GCSE examinations. This finding comes from an analysis of data given by all English special schools – see Appendix 2 on page 8.

Examination success

The proportions of children in Year 11 in mainstream schools and in special schools achieving examination passes to various levels are given in Tables 1 to 3.

Table 1: Percentage of age group obtaining 5 or more grades A-C

School type	*1995*	*1996*
Mainstream	46.34	48.42
Special	0.47	0.46

Table 2: Percentage of age group obtaining 5 or more grades A-G

School type	*1995*	*1996*
Mainstream	84.88	87.22
Special	3.70	4.15

Table 3: Percentage of age group obtaining 1 or more grades A-G

School type	*1995*	*1996*
Mainstream	91.25	93.40
Special	15.32	16.29

These results need to be placed in context, since special schools cater for a diverse population of children. It is not possible from the DfEE published performance tables to tell what specialism a particular school has; the special schools are not classified as being schools for pupils who are physically disabled or for those with hearing impairment etc. It is therefore not possible to differentiate the schools from this data and to say what proportion of children attain particular grades.

However, the DfEE have published data on the global numbers of schools specialising in particular difficulties or disabilities (DfEE, 1995b), and these can give an approximate guide to the constitution of the population of special schools. This data is given in Appendix 1 on page 6 which gives the numbers and percentages of schools specialising in particular difficulties or disabilities.

Discussion

The figures in Tables 1, 2 and 3 (above) show low proportions of children at special schools achieving success in public examinations. A possible explanation for these findings might be that these schools cater for children with learning difficulties, both 'moderate' and 'severe'.

However, the figures in Appendix 1 show that the population of special schools is complex and that a fair proportion of schools, around a third, cater for children whose difficulties stem not from learning difficulties but from a range of other factors, ranging from visual impairment to physical disabilities and emotional and behavioural difficulties. Given this diverse population, it could be expected that the figures for examination success would be higher than reported.

The low figures, particularly for children achieving 5 GCSE successes, might be accounted for by a range of factors including:

- special schools increasingly catering for students who are perceived to be less likely to perform well in examinations.
- small special schools finding it difficult to provide a full range of curricular experiences to higher National Curriculum levels.

If either or both of these factors play a part in the findings made here, it is a cause for serious concern and it is of especial concern to parents of children with special needs who are facing a school choice, where one of the potential choices is a special school.

Moving towards a more inclusive education system would recognise all children's entitlement to mainstream education, whatever their needs and abilities. In such an inclusive system a more flexible arrangement of assessment and accreditation would be developed in which all achievements would be valued and recorded. □

Note: This study follows on from some earlier pilot work by the Alliance for Inclusive Education, London (1996) which indicated that exam performance at special schools was not as high as it should be, given the diverse population of pupils at these schools.

Special schools claim to offer appropriate educational experiences to their pupils, yet as this study shows, a large majority failed to enter any students at all for GCSE examinations.

Only 4 per cent of English special school students in Year 11 gained 5 or more GCSE grades A–G in 1996.

This CSIE report presents the first in-depth analysis of the GCSE examination performance of special schools in England.
